New Connection / Temporary Builder Supply Contract Options

The securing of an electricity supply contract for a new connection or a temporary builder's supply can be a challenging activity for larger connections (+ 250 kVA). Requirements to provide forecast consumption profiles, or to commit to fixed-term contracts at high unit prices with 'take or pay' clauses, as well as the cost associated with increased supplier risk premium, can cause delays and distractions in an already complex project.

EnDCo's New Connection Supply Contract seeks to remove these obstacles – the purpose of this contract variant purely is to cover the period of electricity supply from initial meter energisation through to a stable/predictable load condition being reached.

At this point, it is anticipated that those responsible for the supply point would wish to transfer the supply to an enduring arrangement – maybe an existing group contract, or potentially to a tender for an enduring supply contract armed with actual consumption data.

Of course, EnDCo would be pleased to provide a proposal for the enduring supply contract at that stage, but it should be clearly noted that this is not a condition of the supply contract.

This option is available for half-hourly metered supplies and is primarily designed to be commercially attractive in situations where;

- The initial consumption profile is unknown (or likely to be highly volatile)
- Where the construction (or non-stable phase) is of uncertain duration, and
- Where the supply is for a larger connection (typically 250kVA and above).

EnDCo focuses on the role that the supplier has to play in the new connection process (sending the flows, collecting the data, invoicing the consumption etc.).

Key Benefits include:

- An easy-to-place contract, with fully transparent costs, allowing the primary focus to be on energisation date for the supply.
- Our approach to energy pricing ensures that there are no supplier risk premium costs incurred, and similarly no premium included within the pricing to cover off the imbalance risk that is inherent in any new supply or temporary connection point.
- There is no requirement to provide consumption forecasts or profiles.
- There are no volume penalties / 'take or pay' conditions.
- Climate Change Levy Exempt Supply Options are available.
- No fixed duration of contract – subject only to seven days notice of termination, with a guarantee of no objection within any Change of Supplier process.
- In addition, our invoicing can be 'white labelled' in order to facilitate site development companies to pass the invoice through to their client.

EnDCo is an independent licensed electricity supplier providing direct and transparent access to the wholesale electricity markets both for business energy consumers and generators. It has a track record of delivering measurable benefits to a wide range of companies in the industrial and commercial sectors.
