

Connecting UK business customers  
with the wholesale energy market

## PRODUCTS AND SERVICES

# Renewables Trading

EnDCo works closely with our renewable generation customers to maximise the additional benefits they can extract from their on-site generation assets. One area of particular importance is the issue of renewable energy certificates, which can make a significant difference to the value of a generation site.

Accredited renewable generators qualify for the following renewable energy certificates:

- **Renewable Obligation Certificate (ROC)**  
Typically, one ROC is issued to the operator of an accredited generating station for each MWh of eligible electrical output generated from eligible renewable resources - certain types of generation receive a higher ROC to MWh ratio.
- **Levy Exemption Certificate (LEC)**  
LECs are evidence of CCL exempt electricity supplies generated from qualifying renewable sources along with the associated REGOs.
- **Renewable Guarantee of Origin (REGO)**  
A REGO is a certificate which verifies that electricity has been produced from renewable sources, and one REGO represents one MWh of electricity.

EnDCo is able to sell or trade all of these certificates on behalf of our customers. We are flexible in terms of being able to buy or sell at relevant market prices on a monthly, quarterly or annual basis – thus delivering the opportunity to enhance the cash flow available to our customers should this be deemed advantageous.

EnDCo utilises a variety of routes to market for these certificates, ranging from direct sales at pre-agreed market reflective prices through to arranging for their inclusion in independent auctions – where

certificates from a variety of sources are aggregated and sold to the highest bidder (to the mutual advantage of each individual generator).

Alternatively, EnDCo is able to facilitate the use of eligible LECs & ROCs to aid our customers in off-setting their Climate Change Levy or Renewable Obligation costs.

EnDCo can also provide advice on the process of accreditation which is required to benefit from these schemes.

*Note: LECs associated with power generated up until 31st July 2015 can be used to off-set CCL on electricity consumed up until 31st March 2018.*

For more details contact us.

### Key Benefits include:

- Providing flexibility based on EnDCo's ability to buy and sell at relevant market prices.
- Facilitating enhanced cash flow through use of the appropriate schemes.
- Enabling the option to offset Climate Change Levy and Renewable Obligation costs.
- Offering impartial advice on the optimum accreditation option.

**EnDCo is an independent licensed electricity supplier providing direct and transparent access to the wholesale electricity markets both for business energy consumers and generators. It has a track record of delivering measurable benefits to a wide range of companies in the industrial and commercial sectors.**
